DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-9, 18-38, 47-68, 77-93 are rejected under 35 U.S.C. 102(e) as being anticipated by Ashmore (Patent # 6,738,630).

Regarding claims 1, 30, 59, 60, Ashmore teaches the claimed invention as follows:

A method for accessing Internet addresses based on a request from a wireless device,

comprising: (See abstract, lines 3-5)

receiving a transmitted short-name of a website that a user of the wireless device desires to access from said wireless device, (See col. 1, lines 60-65) said shod-name comprising a code number (See col. 2, lines 49-53) representative of a particular Internet address,

searching a database for said short-name, said database being located at a location remote from said wireless device, (See col. 2, lines 10-15, wherein content server searches the content by mapping marker or short name with content) and if said short-name is found, retrieving said particular Internet address so that said

Art Unit: 2627

wireless device can be connected to said particular Internet address (See col. 2, lines 15-18).

Regarding claims 2, 3, 31, 32, 61, 62, Ashmore teaches accessing domain name through wireless device as described in abstract. Content database is accessed through Internet as shown in fig 1.

Regarding claims 4, 5, 33, 34, 63, 64, Ashmore teaches the claimed invention of receiving short name or marker by context server, which in turn queries content database as shown in fig 4. Mapping short-name to URL or domain is described in col. 2, lines 10-15 and col. 6, lines 54-58.

Regarding claim 6, 22, 24, 35, 51, 53, 65, 81, 83, Ashmore teaches a marker as series of symbols or text string as described in col. 2, lines 49-53 to obtain domain name. It is inherent that multiple marker or short-names could be used to map single address.

Broadest reasonable interpretation of root short-name, separator code and extension is a series of series of symbols.

Regarding claim 7, 36, 66, Ashmore teaches context server which receives marker from mobile device and then sends context information along with marker to content server using protocols described in col. 5, lines 30-49.

Art Unit: 2627

Regarding claims 8, 9, 23, 37, 38, 52, 67, 68, 82, Ashmore teaches the claimed invention of content server storing pointers to other contents over internet as described in col. 7, lines 35-40 that is equivalent to claimed limitation of searching second database. Internet searching is equivalent to searching plural databases in logical hierarchy.

Regarding claims 18, 19, 47, 48, 77, 78, Ashmore teaches the claimed invention of inputting short name through voice command as described in col. 3, lines 59-62, wherein user uses spoken words. It is inherent that voice command is transmitted in digital form over the network.

Regarding claims 20, 21, 49, 50, 79, 80, Ashmore teaches a cellular phone input device with marker as described above. It is inherent that marker can be a phone number.

Regarding claim 25-29, 54-58, 85-88, Ashmore teaches the claimed invention of marking consisting of geographic location as described in col. 3, lines 12-16. It is inherent that country is described by geographic location.

Regarding claims 89-93, Ashmore teaches the claimed invention of registering and dialing a number other than phone number as shown in fig 1, wherein the marker is 42. Similarly a context and content server maps markers with domain address. It is inherent that marker or short-name is registered.

Response to Arguments

Page 5

3. Applicant's arguments with respect to claims 1-9, 18-38, 47-68, 77-93 has been considered but are most in view of the new ground(s) of rejection.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sanjiv D. Shah whose telephone number is (571) 272-4098. The examiner can normally be reached on M-F 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bhavesh M. Mehta can be reached on (571) 272-7453. The fax phone
